

Sub Template Widget

Widget Use

Renders one template within another. This can be particularly useful when upgrading to BPD from an older version of CSS. Legacy templates with data sources and specific caching methods can be inserted into existing templates without recreating the content. (In the simple example below, the template 'FooterCopyright' has been inserted as a Sub Template into the Product Detail template.)

Example of Widget Use

Reflex A4 White Paper

Product Code: CV232

\$24.75 inc GST

1

Qty in cart: 0

Technical Specifications

Brand	Reflex
Size	A4

Where can the Widget be placed?

The widget can be used in the following templates:

- All Templates

Widget Options

Option	Use	Comments	Available from Version
Description	A short description of the widget's use.	We recommended this field be updated so the widget's purpose is clear at a glance from the template page.	All
Layer	The layer the widget is valid for.	The layering technology allows for the content to be shown to specific audiences. This is handy if the content is only valid for a certain type of user, or if the same widget is required for more than one audience, but different configuration is needed. The widget can be added to the zone more than once and the layer feature can determine which audience can see each widget.	All
Template Name	The name of the template you wish to display should be entered here.	Specify an existing template only.	All

Other Widgets

- [SignalR Group Message Selector Widget](#) — Define the text for the button users will click when selecting a SignalR client—in this example, a printer enabled to [print orders/invoices in PDF format](#).
- [Account Payment Detail Widget](#) — Renders the payment detail information in the body of the various Account Payment confirmation emails. Information includes (but is not limited to) the order number, account number, invoice, and amount paid.
- [Dashboard Recent Invoices Widget](#) — Displays the logged in user's 5 most recent invoices, with a link to each invoice in detail, as well as a 'View All' option.
- [Dashboard Account Status Widget](#) — Displays a list of the user's customer account status, including balance owing and payment terms, as well as links to statements and the account payment page.
- [Dashboard Articles Widget](#) — Displays a list of the site's news articles, with an image, title, a 'read more' link, and the article expiry date.
- [Dashboard Product Favourites Widget](#) — Displays a list of the user's top 5 favourite products, with links to each product page, as well as an add to cart button.
- [Dashboard Back Orders Widget](#) — Displays a list of the user's backorders with links to the order detail page.
- [Social Sharing Plugin Widget](#) — Acts as a placeholder to output customised javascript based on content from [Add This](#) (social network Share buttons, for example).
- [Return Lines Widget](#) — Where product Returns functionality is in use, renders the return order lines (product, quantity, price, etc.) on the return entry page.
- [Return Information Widget](#) — Where product Returns functionality is in use, renders the details input section (reason, number of parcels) on the returns entry page.
- [Return Confirmation Summary and Lines Static Widget](#) — Where product Returns functionality is in use, renders the return order lines (product, quantity, price, etc.) on the confirmation page after the user submits their return request.
- [Return Confirmation Return Info Widget](#) — Where product Returns functionality is in use, renders the return details (reason, number of parcels) on the confirmation page after the user submits their return request.
- [Return Confirmation Address Widget](#) — Where product Returns functionality is in use, renders the pickup address details on the confirmation page after the user submits their return request.
- [Return Confirmation Message Widget](#) — Where product Returns functionality is in use, renders messages to the user on the confirmation page to advise that their return is in progress + next steps.
- [APR Verification Required Widget](#) — Where Auto Part (B2B) Registration + automatic approval functionality is in use, renders the message content to the new user, advising that they must verify their email address in order to be approved.
