

Kit Component Display

Overview

Kit items are defined in the ERP by an Item Type 'K' and a Bill Of Materials (BOM). The BOM is the list of all items that make up a kit. It's often beneficial to list out the kit's components on your website, especially if they are not in the product description. Sites on 4.31+ can also allow the components to be added individually to cart. Adding the components and BOM is done through the Kit Component Display Widget.

Kit Component Display

Add Widget

5. Select the options in the widget as required. If your site is 4.31+ , you have the option of allowing users to buy the components individually. See the guide to the [Kit Component Display Widget](#).

The screenshot shows the 'Kit Component Display' configuration window. On the left is a sidebar with a search bar and a menu containing 'General Options' (highlighted in orange), 'Titles', 'Common Options', and 'Documentation'. The main area is titled 'General Options' and contains several settings: 'Description' (text input), 'Layer' (dropdown menu set to 'All Pages'), 'Show Product Code?' (toggle switch, turned on), 'Show APN Instead Of Product Code?' (toggle switch, turned off), 'Show Product Description?' (toggle switch, turned on), 'Show Product Quantity?' (toggle switch, turned on), 'Quantity Format' (dropdown menu set to 'No Decimals'), 'Use Zoned Template' (toggle switch, turned off), 'Label for Add All To Cart button' (text input set to 'Add All To Cart'), 'Display location for Add All button' (dropdown menu set to 'Bottom Only'), and 'Display type for zoned layout' (dropdown menu set to 'list'). Below these is a 'Zoned Template Header' section with a rich text editor toolbar and a text area. At the bottom right, there is a toggle for 'Enable widget on Save' (currently off), a red 'Cancel' button, and a green 'Save' button.

6. When you have finished and want the widget to be applied straightaway, toggle ON **Enable widget on Save**.
7. To save the settings, click **Save**.
8. Check the kit components are displayed properly. In another browser or incognito window, launch your website and navigate to a kit product.

Additional Information
