## Overview

The Layout Creator in the CMS allows you to create custom layouts for various pages throughout your site.

Add rows and columns to a layout as you wish. Each row can be made up of one or many columns. You can even create a custom Theme, if you choose.

Layout Creator can be used with these templates:

- Product List
- Theme
- all Content pages

With the release of CMS 1.23, Layout Creator will be available for:

- Cart
- Checkout
- Category List Zoned
- Product List Item
- Flyer

The guide below will show you how to create your own page layouts quickly and easily.

Create a new Layout

OptionsCancelSave

Adjust the width of columns in each row, adding or removing columns as required. You can also add rows at any time, and remove rows unless the layout is already in use.

1. Name your layout \*

2. Create your layout \*

Add a row

## Enable Layout Creator

Layout Creator is not on by default. Contact [Commerce Vision](#) to request it.

## Create a New Layout

1. In the CMS, go to the page/template you wish to design the layout for.

2. In the layout preview pane, the current layout is displayed. You can toggle between Desktop, Tablet, and Mobile views.

3. Click **Change**. Any existing custom layouts will be displayed, followed by out-of-the-box BPD layouts.

4. Hover over **Options**, and click **Add Custom Layout**.

5. Give your Layout a **Name**.

6. If you like, you can load an example layout, then edit as required. Hover over **Options**, then click **Load Example Layout**.

7. Otherwise, start by adding a row.

8. The modal **Add New Row** window launches. This is where you specify:

- CSS classes to apply to the row display.
- Whether the row is full width (e.g. no container wrapping the row)

- How many columns you'd like (up to 6). If there are 2 or more columns, they will be created with equal width.

**Add New Row**

Additional Classes

Full Width? ☐

How many columns? 1 Column ▼

Cancel Confirm

9. To save the row, click **Confirm**.

(The rows and columns are automatically named in the format Row1Column1, Row1Column2, and so on. You can rename these to anything you like!)

33% Row1Column1	33% Row1Column2	33% Row1Column3	<span>Edit</span> <span>Options</span>
--------------------	--------------------	--------------------	--

Add a row

10. Click the **Add a row** button to continue building your layout. Add as many rows as required.

11. To save your new layout, click **Save** or **Save & Exit**.

## Edit a Column

1. Hover over one of the columns in your row. You'll see two options: **Edit** & **Delete**.

2. Click **Edit**.

<span>Edit</span> <span>Delete</span>	33% Row1Column2	33% Row1Column3
---------------------------------------	--------------------	--------------------

3. The **Column Options** modal window launches. Here's where you can:

- Give the column a unique name - one that is meaningful to you.
- Specify an additional CSS class for the column's display.
- Change the column width. The row will never exceed 100% width, so your column options will take that into account. If you want to increase the width of one column, you may need to first delete or decrease the width of another.

**Column Options**

Name \*

Additional Classes

Column Width 33% ▼

Cancel Confirm

4. To save any changes, click **Confirm**.

## Edit a Row

1. On the right hand side of each row, you'll see two buttons: **Edit** and **Options**.

2. Click **Edit** to make changes to the CSS classes and the Full Width setting for that row.

3. Hover over the **Options** button to:

- Add Column
- Delete Row

4. Keep in mind that your row cannot exceed 100% width. If you have 3 columns at 33% and you click 'Add Column', a message displays to tell you to resize other columns first.

## Edit a currently used Layout

A layout that is currently in use somewhere on the website will have limited editing options. This is to protect the look and functionality of the page(s) currently with that layout.

If a layout is in use, a message displays to tell you the layout cannot be edited and which templates are using it.

Editing of existing rows is disabled as this layout is used by the following other templates: [Home Page](#)

You will also be able to:

- Add a new row
- Change column widths and class names for the newly added row

- Create a duplicate/copy of the layout

## Additional Information

Rows and columns can be added to a layout to follow your design wishes.

<b>Minimum Version Requirements</b>	**.*.*
<b>Prerequisites</b>	
<b>Self Configurable</b>	Yes
<b>Business Function</b>	Site Structure
<b>BPD Only?</b>	Yes
<b>B2B/B2C/Both</b>	Both
<b>Third Party Costs</b>	n/a
