

Offline Order Emails

Overview

When a user shops on your website, they receive an Order Confirmation email once their order is submitted. As their order leaves the warehouse, they are also sent an Order Shipped email to advise that their goods are on the way.

But what about users who *don't* order via your website? There will always be customers who prefer to chat to their Sales Rep and order with them, or those users who need to speak to a Customer Service advisor before placing an order over the phone. Good news - as long as the email address is stored in PRONTO, those customers can receive the same Order Confirmation and Shipped emails as your web users!

Please contact Commerce Vision for advice before configuring this feature in your Stage site. We can help ensure that no emails are sent to real customers during testing.

Prerequisites

1. In order to take advantage of this feature, your website must be running version 3.84.00+, and your Integrator must be running version 4.62.00+.
2. It's important to note that only customers marked 'Active' in CSS can receive offline order emails. See [Customer Activation](#) for more information.

Your Order Is Confirmed

Order Summary

Item	Qty	Price (ex GST)	Unit	Discount	Total (ex GST)

Enable the Functionality

1. Login to the CMS.
2. Navigate to **Advanced Content Resources**.
3. Search for the resource '**rcOrderConfirmedEmailWhereClause**'
4. Click '**Modify**'.
5. In the Resource Value field, enter '**1 = 1**'.

If you're testing this in your Stage site (recommended!), adjust the where clause to one specific test customer only. This way, orders in the Test ERP won't trigger real emails to real customers during testing!

Instead of a where clause of "1 = 1", try something like **Code = 'ABC02'** (which would apply to customer ABC02 only).

Resource Maintenance

Language Code : en-au

Resource Value :

Description :

10. Click 'OK' to save.
11. Now search for the resource 'rcOfflineOrderConfirmationEmailInvoiceDateBuffer'.
12. Click 'Modify'.
13. In the Resource Value field, enter the number of days to check for orders. This prevents confirmations for old orders on start up being sent. If this is set to 0 - the functionality is effectively off.
14. [Refresh the System Settings dictionary](#) to pick up the above changes. You can find instructions here - [Cache Refreshing](#).

Please note

If Order Shipped emails have not been enabled for your site, your offline users will only receive the Order Confirmation email. To configure Order Shipped emails, refer to this guide - [Order Shipped emails](#).

Update Integrator Settings

1. Open the Integrator client.
2. With the appropriate site selected, click '**Settings**'.
3. Select the '**Advanced**' tab.
4. Set the '**Customer Email Record Type**' to '**E**'.

The screenshot shows the 'Advanced' tab of the Integrator Settings window. The 'Local Cache' tab is selected, and the 'Customer Email Record Type' is set to 'E'. The window contains various settings for the integrator, including file upload settings, integration mode, and live pricing/availability options.

Customising Templates

To edit the content or layout of your Offline Order Confirmation and Shipped emails, simply configure the widgets in the templates as required.

1. Login to the CMS.
2. Navigate to **Content Emails**.
3. Select the required template:
 - Offline Order Confirmation Email
 - Offline Order Shipped Email

4. Add, Edit, or Delete widgets as required.
5. Use the "Test Email..." option to verify that output is as you expect.

Customising based on Order Source

You may wish to have a different email Subject for certain order types.

Do you have physical, Point Of Sale retail locations? For 'in person' orders, you may not want an email sent to your customer saying "Your Order Has Shipped" (because they've taken the goods with them!). A subject line of "Your Order Receipt" may be more appropriate in this scenario.

The Subject of your Offline Order Shipped email is determined by the value of the resource "rcEmailSubjectOfflineOrderShippedDefault". You can override this for different order sources, by creating a new resource for each type that requires a custom subject line. Here's how:

1. Find the **PRONTO code** for the order source you wish to customise. For example, "P" might signify a POS order in PRONTO, "-" might be internet, and so forth.
2. **Create a new resource** to act as an override for that source type:
 - a. In the CMS, navigate to **Advanced Content Resources**.
 - b. Click **New**.
 - c. In the **Resource Code** field, enter "**rcEmailSubjectOfflineOrderShipped_XYZ**", replacing XYZ with the **PRONTO code** for your order source.
 - d. In the **Resource Value** field, enter the custom text for this order source. This will become the Subject for offline emails from this source.
 - e. Give the resource a **Description** to help you identify it and find it in searches.
 - f. Click **OK** to save.

The screenshot shows a form for creating a new resource. The fields are as follows:

- Resource Code :** rcEmailSubjectOfflineOrderShipped_P
- Language Code :** en-au (dropdown menu)
- Resource Value :** Your Order Receipt
- Description :** Custom subject line for POS orders.

- g. Your Offline Order Shipped email subject will now display this resource value. Any source types without an override will display the value of "rcEmailSubjectOfflineOrderShippedDefault".

Now that the subject line is being overridden for this source type, you may wish to also customise the heading shown in the body of the email.

You can do this via the [Email Title Offline Order widget](#).

1. In the CMS, navigate to **Content Emails**.
2. Select the **Offline Order Shipped Email Template**.
3. In the zone 'AfterHeader' (or other zone according to your layout), add an [Email Title Offline Order widget](#).
4. Drag the widget so it sits below the original Email Title Offline Order widget.
5. **Edit** your newly added widget.
6. Enter the **Email Title** to be displayed in the body of the email.
7. Set the **Title Type** to either **Content**, or **Order** (Order will include the order number)
8. In the **Order Source Inclusions** field, enter the type you wish to display this title for.
9. In the **Order Source Exclusions** field, enter the type(s) you wish to exclude for this title.
10. Click **Save**.

The screenshot shows the configuration form for the 'Email Title Offline Order' widget. The title of the form is 'Email Title Offline Order - Email Title for POS orders'. The form has a sidebar with 'General Options' selected. The main area contains the following fields:

- Description :** Email Title for POS orders
- Layer :** All Pages (dropdown menu)
- Email Title :** Your Order Receipt
- Title Type :** Content Title (dropdown menu)
- Order Source Inclusions :** P
- Order Source Exclusions :** S,2,-,L,P

Below the 'Order Source Inclusions' and 'Order Source Exclusions' fields, there are radio buttons for 'Comma separated'.

11. Now, **Edit** the original Email Title Offline Order widget.
12. In the **Order Source Exclusions** field, enter the type you just customised the subject for.
13. Click **Save**.
