Content & Layout Widget Library

- Breadcrumb Widget — Displays the breadcrumb trail for all pages, including static content, products and categories.
- Category Banner Widget — Displays a banner on category or product pages, with options to include a title, description, and image.
- Contact Details Widget — Renders map and contact information, as is commonly used on Contact Us or Store Locator pages.
- Contact Link Widget — Renders contact information in the form of address details, mailto: links, and/or links to Contact Us pages on the website.
- CUSTOM_Side by Side Content Tiles Widget — Renders two side by side content tiles in a zone with widget options for selecting or adding background colour, image, text and link/button positioning.
- HTML Snippet Widget — Renders HTML code such as embed / tracking code, or third party scripts.
- Navigation Button Widget — Adds a styled button that can link to any page on your site or externally. You can add an icon to the button and configure elements such as colour, size and icon position.
- Page Title Widget — Displays the page title text. It can be used in any zone of a template, but recommended use is once at the top of a page.
- Phone Number Widget — Renders phone number information which can also be made into 'tap to call' links for mobile users.
- Print Button Widget — Renders a print button.
- Specific Page Type Widget Library
  - Page Title Dynamic Widget — Dynamically renders the page description from the menu record. Use of this widget in the Theme Layout may negate the need for the 'Page Title' widget on individual page templates.
  - Questionnaire Results Title Widget — Displays the title or heading for the Questionnaire results email.
  - Questionnaire Results Widget — Renders the user-entered questionnaire data (a 'Contact Us query, for example) in an email template.
  - Questionnaire Widget — Renders questionnaire fields as a form on the page.
  - Tax Toggle Widget — Renders a toggle button to allow the user to switch between inc & ex-tax for the primary product price display.
- Static Content Widget — Renders static content on the page (text, tables, links), with support for your site's Style Guide.
- Sub Template Widget — Renders one template within another. This can be particularly useful when upgrading to BPD from an older version of CSS. Legacy templates with data sources and specific caching methods can be inserted into existing templates without recreating the content.
- User Name Widget — Renders the username or email address.
- Value Propositions Widget — Renders a styled horizontal bar with 3 distinct sections (each referred to as a "proposition"). Each proposition consists of customisable logo and a text which can be linked to any URL (within your site or external to it). On mobile devices, one proposition is displayed at a time, fading into the next and then cycling through in sequence.
- Video Widget — Displays a video on any page of the website, with correct styling to ensure the video is responsive across all devices. Both YouTube and Vimeo formats are supported.
