

Slider Banners

Overview

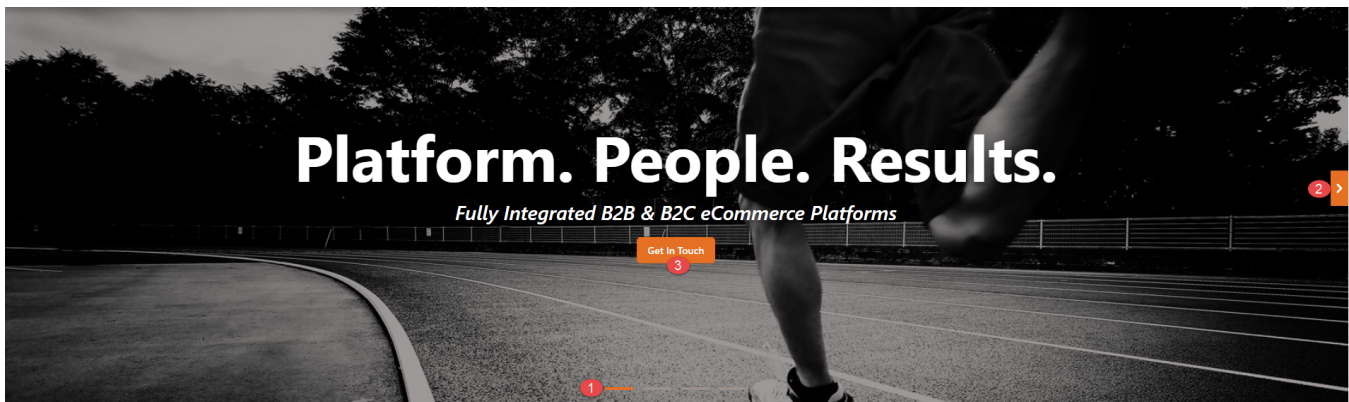

Banners encourage instant engagement with your website users, so why use that valuable space on a page just for one highlight or call to action?

Slider banners are common features on many ecommerce sites these days. On the Home Page for example, you may want to draw attention to a promotional campaign, new products, *and* communicate changed shipping conditions. With the slider format, the loaded set of banners ('banner type') displays in the one space in a carousel. The user can easily go to another banner by clicking the 'next icon' or the link to the one they want. If autoplay is on, the carousel displays a for a set time before transitioning to the next one.

The slider banner can also be used to embed an externally-hosted video banner on a page or template. **NOTE** - Styling may need assistance from Commerce Vision.

Example of a banner in a slideshow. Features - (1) Clickable 'dot' icons on a banner to indicate which banner in the slideshow is in view. Also allows user to click to other banners quickly. (2) Clickable Next/Previous Navigation buttons. (3) Clickable link to another page on your site or to an external page.

Step-by-step

This guide takes you through the process of placing multiple banners in a slider format on your website.

Prerequisites

- Banners feature enabled
- Banner type and banners created. See: [Banners](#)

Add Banner Slider Widget

1. In the CMS, go to **Content Pages & Templates**, then the page or template to display the slider banner. (This example uses the site Theme template, then restricts display to the Home Page with a [Layer](#).)
2. In the page/template, go to the **zone** for your banner slider.
3. Click **Add Widget**.
4. Search for **Banner Slider** and click **Add Widget**.
5. Edit options in the Banner Slider Widget. **IMPORTANT** - To display a banner item on this page, in **Banner Type Filter**, select the banner type.
