# Reset the Price Cache

Overview

For sites not using Live Pricing, it is important to note that Customer Self Service caches the calculated pricing for a customer and product in order to improve the overall performance of the site.

While prices are generally only cached for 1 hour, flushing this data is quite simple. Follow the process below to clear the price cache and ensure prices displayed are based on the latest integrated data.
Step-by-step guide

To Reset the Price Cache:

1. In the CMS, go to **Settings Cache Management**.

2. Click the '**Clear Cache'** option for the Price Cache.

3. A confirmation will display. The price cache has now been reset for all users.

> ✅ For information on how to refresh the product & stock security cache, see Reset the Product Cache.
