

# Scripts & Styles Widget

## Widget Use

The new Scripts & Styles widget allows you to bundle related scripts and styles into one widget to function as a unit, or add multiple Scripts & Styles widgets to a page so they operate independently. Due to its name, and because the widget functions to run scripts or apply styles only, you know at a glance if a page is using customised JavaScript or Style Sheets.

## Example of Widget Use

Following is an example of the widget in use:

 **Edit - Store Locator Template**

 **Widget Layout**

Zone: Content

 ☒ Page Title

 ☒ CUSTOM:StoreLocator

 ☒ Scripts & Styles

 Add Widget

## Scripts & Styles

### Scripts & Styles

Please enter or select a script / style ...

### Existing Scripts & Styles

File Name	Type	Options
cv.css.background.css	Style Sheet	Edit  Remove
cv.js.check-location.js	JavaScript	Edit  Remove

## Where can the Widget be placed?

The widget can be used in the following templates:

- All pages

## Widget Options

Option	Use	Comments	Available from Version
Description	A short description of the widget's use.	This description should clearly state the widget's purpose. It is included with the widget name when added to a template page.	4.13.00
Layer	The layer the widget is valid for.	<p>The <a href="#">layering technology</a> allows for the content to be shown to specific audiences.</p> <p>This is handy if the content is only valid for a certain type of user, or if the same widget is required for more than one audience, but different configuration is needed.</p> <p>The widget can be added to the zone more than once and the layer feature can determine which audience can see each widget.</p>	4.13.00
Scripts & Styles	Select existing scripts and styles to add to the widget	<p>You can bundle multiple scripts and styles within the same widget.</p> <p>You can add multiple scripts and styles widgets and have them operate independently of other scripts and styles.</p> <p>This setting will tell you how many scripts or styles are applied.</p>	4.13.00
