

Detailed view of changes in Draft mode

If you use the **Page Preview** feature in CMS, you'll already know you can keep all changes to a page in Draft mode until you choose to publish them.

Now, we've added a new *Changes* view to give you even better visibility of the differences between your live and draft versions of a page!

Clicking the 'Changes' option for a draft page will open a list of all the changes made on that particular template. You'll be able to see:

1. Which zone of the template the changed widget is in
2. The name and description of the widget in question
3. The change that's been made (add / edit / remove)
4. The user who made the change
5. The date the change was made
