

JSON Field Groups

JSON field groups are used to create simple data fields that just needs to be stored, loaded and reloaded to pages without requiring an entire page refresh. An example would be the Change Password functionality on newer (BPD) website versions.

Some fields can be added to existing JSON field groups so that they display on a page on your website.

Step-by-step guide

To add fields to an existing JSON Field Group:

1. As Administrator, navigate to **JSON Field Groups** (/zJsonFieldGroups.aspx). (**NOTE** - This page may have been added in your CMS.)
2. Find the required field group from the list.
3. Click **Fields**.
4. Click **New**.
5. In **Json Field Name**, select the required field from the drop-down selector. Fields displayed will be limited to the database table the field group is associated with.

	Table Name	Json Field Group Name	Json Field Name	Prompt
<input type="radio"/>	User	saveAddressFieldGroup	DeliveryContactName	
<input type="radio"/>	User	saveAddressFieldGroup	DeliveryAddress1	
<input type="radio"/>	User	saveAddressFieldGroup	DeliveryAddress2	
<input type="radio"/>	User	saveAddressFieldGroup	DeliverySuburb	
<input type="radio"/>	User	saveAddressFieldGroup	DeliveryState	
<input type="radio"/>	User	saveAddressFieldGroup	DeliveryPostcode	
<input type="radio"/>	User	saveAddressFieldGroup	PhoneNumber	
<input type="radio"/>	User	saveAddressFieldGroup	SoBillAddr1	
<input type="radio"/>	User	saveAddressFieldGroup	SoBillAddr2	
<input type="radio"/>	User	saveAddressFieldGroup	SoBillAddr3	
<input type="radio"/>	User	saveAddressFieldGroup	SoBillAddr4	
<input type="radio"/>	User	saveAddressFieldGroup	SoBillSuburb	
<input type="radio"/>	User	saveAddressFieldGroup	SoBillState	
<input type="radio"/>	User	saveAddressFieldGroup	SoBillPostcode	
<input type="radio"/>	User	saveAddressFieldGroup	NotifyEmailAddress	

Modify : New : Delete : Back : Cancel : OK

15 records. (1 page)

Json Field

Please Select ...

Name : User - AllowPasswordReset

Json Field

User - AllowPriceOverride

User - AllowRedirectToProdViewForSingleSearchResult

User - AllowRoleBasedOrders

User - AllowRoleBasedOrderTemplates

Param

User - AllowStaging

Value :

User - AllowStatementReprint

Prompt :

User - AllowUserIPRestriction

Show

User - AlterExistingTemplate(System.String TemplateName, Boolean overwrite, Boolean CustTemplate, Boolean changeRole, Boolean roleTemplate, Boolean excludeLines, BusinessObjects.OrderT

6. In **Seq**, enter a number to order the display of the field in the list. The lower the number compared to other fields in the list, the higher up in the list it will display.
7. Leave other fields blank.
8. To save this field, click **OK**.
