Two factor authentication for CMS Login

Two-factor authentication (2FA) is now available for CMS User logins. This adds as an extra layer of security to protect your data and website by ensuring the person logging in is the owner of the account. When active, users must enter their password *and* verify the login through a PIN (passcode) provided by an app on their personal device.

ⓘ   Refer to the Two Factor Authentication for CMS Login help page for more information.
